

GREEN MATTERS

AZ Goes Green

AZ, a provider of transportation, fulfillment, and distribution services based in New Jersey, has announced that, in the interest of protecting the environment, it will begin to use a lashing system that is designed with polyester Cordstraps, rather than lumber, as it acquires and secures exports and cargo loads.

Through its usage of Cordstraps, AZ has eliminated its need for wood blocking and bracing throughout the cargo transport process.

Additionally, AZ's new lashing system has been approved by the National Cargo Bureau for its effectiveness. The system's Cordstraps are not only lightweight, convenient, and weather-resistant, but environmentally friendly as well.

"By going 'green' with our new cargo restraint system, we will be able to save hundreds of trees each year," states Richard Lombardi, president, AZ. "This process will allow us to continue to provide secure cargo transportation worldwide, while making conscious decisions to protect the environment."
